

EVERY SEASON IS PARASITE SEASON.

Ticks can be active whenever the temperature is above freezing (0°C).

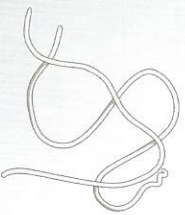

Cats are at higher risk for **tapeworms** than dogs due to their predatory inclination and ingestion of intermediate hosts (rodents).

Fleas are active above +13°C, but can live year round indoors.

Some **intestinal worm eggs** can survive in the environment at ANY temperature.

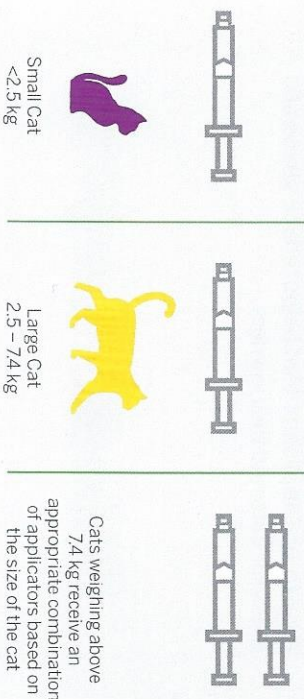

Heartworm can be spread by mosquitoes whenever the temperature is above +14°C.

Ear mites live deep in ear canals and feed on epidermal debris and secretions produced by inflammation.

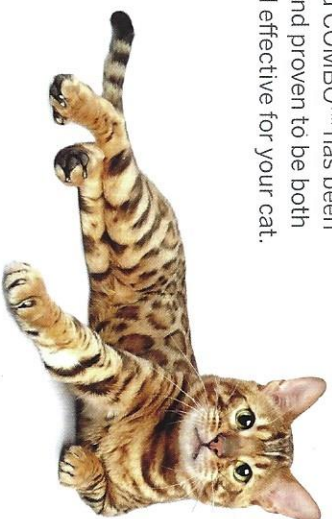

FLEXIBLE DOSING FOR KITTENS AND CATS OF ALL SIZES!

SAFE ENOUGH FOR KITTENS. STRONG ENOUGH FOR CATS.¹

Nothing is more important than your cat's safety. That's why NexGard COMBO™ has been tested and proven to be both safe and effective for your cat.

ALL-IN-ONE PROTECTION

The first all-in-one monthly topical solution to protect against all of the following:

TICKS

FLEAS

INTESTINAL NEMATODES

HEARTWORMS

EAR MITES

HEARTWORM

NexGard COMBO™

PROTECT YOUR FAMILY FROM ZOOZIS.

What's zoonosis?

It's a disease which can be transmitted to humans from animals. Internal nematodes and tapeworms represent zoonotic risk. If cats are not routinely dewormed, pet owners and their families (especially young children) are at increased risk of exposure and infection. NexGard COMBO™ helps protect against these zoonotic parasites.

Treatment

The treatment schedule should be based on veterinary knowledge of local environmental and animal risk factors. Monthly treatment may be indicated for optimal parasite control of both external and internal parasites.

ONCE-MONTHLY TOPICAL SOLUTION.

We know that medicating a cat can be a challenge. That is why NexGard COMBO™ is applied with an easy-to-use applicator that helps reduce stress and mess for cats and their owners.

ALL-IN-ONE PROTECTION IN ONE EASY APPLICATION.

START AND STAY WITH NEXGARD COMBO™.

Formulation designed to be gentle and safe for topical application in cats.

HUNTING

Cats love to chase and hunt rodents and other small wild prey that are known to host parasitic worms, including tapeworms.

GROOMING

When grooming, cats ingest anywhere between 18–50% of their fleas, which can then infect them with tapeworm.

ROAMING

Adventures around the backyard, neighbourhood, gardens, local parks, and public places can expose cats to ticks, fleas and worms, all year round.
